**TINDALL TREE SERVICE**

TREES, SHRUBBERY AND LANDSCAPING CAN SERVE AS AN EYE-CATCHING GATEWAY TO ANY PROPERTY. LET AN ACCOMPLISHED ARBORIST FROM WHARRAM TREE SERVICE HELP YOU UPDATE OR MAINTAIN THE OUTDOOR PORTION OF YOUR PROPERTY.

### MAKE AN INVESTMENT

Proper tree care is an investment in any property, and at Wharram Tree Service our experienced arborists will work with you to improve, maintain, and protect your outdoor space. No matter the scope of your project or size of your property, we pledge to provide you with:

- Thorough, effective tree care
- Attractive tree and shrub maintenance
- Resourceful landscape management

### MORE THAN JUST AESTHETICS

An arborist from our team can do more than just help your property look appealing; Wharram Tree Service can actually help keep you and those around you safe. By identifying unstable or infested trees and shrubs, we can work to prevent or mitigate safety issues relating to your outdoor vegetation.

### OUR GOALS

At Wharram Tree Service, our arborists are committed to building lasting relationships with customers by offering:

- Affordable tree care
- Convenient appointment scheduling
- A wide variety of tree, shrub, and maintenance packages

## TREE AND SHRUB REMOVAL

### TREE AND SHRUB REMOVAL

Tree removal is a significant part of arboriculture and one that Wharram executes professionally and safely. Our goal is, and has always been, to provide services that keep trees healthy, but there are instances when removal is the best alternative for the landscape and homeowner.

Tree removals are performed to eliminate weak trees that are prone to breakage as well as those that have become hazardous. Often, trees will outgrow their environment and need to be removed for practical reasons such as allowing for new construction and home additions.

Tree removal is the most hazardous aspect of arboriculture. Often, tree workers must remove trees growing in confined spaces near houses, utility lines and other sensitive areas. Tree removal requires considerable expertise to successfully perform this task.

**AT WHARRAM, OUR ARBORISTS ARE HIGHLY TRAINED TO WORK SAFELY AND EFFICIENTLY IN ALL TREE REMOVALS. WE PROVIDE THOROUGH CLEAN-UP OF DEBRIS AND STRIVE TO MINIMIZE THE IMPACT TO SURROUNDING VEGETATION.**

As part of the tree removal process, the stump will typically be left as close to the ground as possible. We recommend removal of the stump at that time.

## TREE PRUNING

**WITH PROPER PRUNING THERE IS A REDUCED RISK OF DECAY, STORM DAMAGE, INSECT INFESTATION AND DISEASE.**

### TREE AND SHRUB PRUNING

Wharram has trained, professional arborists experienced in pruning techniques to improve shape, structure and to reduce hazards. Proper trimming is recommended and is a necessity for a variety of reasons:

- Dead wood, diseased, weaker and structurally poor limbs that pose a hazard or may lead to wood decay
- Crossing limbs that rub causing structural defects and failure
- To provide clearance for utility wires, buildings and to improve visibility
- Selected branches to increase light penetration onto lawns, gardens or to promote interior crown health and growth
- Selected limbs to improve views and site lines

## SONIC TOMOGRAPHY

## STUMP REMOVAL

Stump removal can be challenging and often special machinery is required. Stump grinding by a professional is the easiest and safest way to handle this work.

When it comes time to have a stump removed the best choice is to have one of our team members use a Stump Grinder. Stump removal will be labour intensive without it. Our grinders will dig up to 24" to ensure no wood material is left in the ground.

Wharram Tree Service offers safe and worry free stump removal. We manage all locates and permissions for underground utilities.

**THE STUMPS OF REMOVED TREES CAN CREATE SAFETY HAZARDS AND HAVE A NEGATIVE IMPACT ON YOUR LANDSCAPING.**

## STUMP REMOVAL

## EMERGENCY STORM SERVICES

Most damage to a property during severe weather occurs when limbs or trees fall. While it is impossible to totally protect your trees, a certified arborist can inspect for issues that could predispose trees to failure during severe storms. Pruning is essential for weight reduction of limbs and crown thinning. When there is an issue with the tree's structure, installation of cables or braces can help the tree's ability to withstand high winds or heavy snow.

**OUR EXPERTS CAN REMOVE TREES OR BRANCHES DAMAGED DURING ADVERSE WEATHER CONDITIONS.**
